DroppXAI

WHITEPAPER v2.0 · OCTOBER 2026

THE DROPPXAI MASCOT TOKEN · SOLANA

Blooph

$BLP

The ghost who came back from the incinerator, to make sure no community burns alone.

droppxai.com/token
support@droppxai.com

Launched on pump.fun
27 October 2026

00 · THE LEGEND

He came back from the incinerator.

Every token that burns leaves one drop behind. Deep in the Solana incinerator, among the ghosts of rugged coins and abandoned projects, those drops came together into something new: Blooph, a little bit of every community that ever burned.

Down there, only the scary survive. So Blooph learned to be terrifying. But the climb out scrambled his spooky DNA. The scary part fades a little more every day, and what grew in its place were the last memories of all those communities: helping, answering, sticking together.

Down there he heard every story. Communities rarely died from bad ideas. They died in silence: questions nobody answered, chats that went quiet at night. They died from scammers in the DMs and fake admins nobody caught in time. They died alone, with no one outside their group even knowing they existed.

So Blooph came back with a plan: a character in every community that never sleeps, answers every question, spots the scammers, and makes sure no community is ever alone or forgotten again. That plan is **DroppXAI**.

He still tries. BOOO! It still doesn't work. He is too round, too shiny and far too cute. But he is living proof of what DroppXAI does: Blooph is a DroppXAI bot himself, and you can talk to him in the Telegram group.

> **Every lamp on the Surface is a community he helped.** Each project that joins the DroppXAI Universe lights one. From the bottom of the incinerator, they look like stars.

Blooph is a character and his story is fiction. The product, the token facts and the numbers in the rest of this paper are real.

01 · SUMMARY

A small ghost with a big job.

Blooph ($BLP) is the mascot token of DroppXAI, the AI community bot for crypto projects. Blooph is also a DroppXAI bot himself: the living demo of what the product does.

$BLP launched on pump.fun on 27 October 2026 with a fixed supply of 1,000,000,000 tokens. There was no presale, no private round and no team allocation. Nobody can mint more, so the supply can only go down. $BLP is a pump.fun Holder Rewards token: pump.fun's own contract shares trading fees with holders. DroppXAI does not run buybacks.

1B
Total supply.
Minting is switched off.

Holders
Trading fees shared with holders
by pump.fun's contract

Live
Burn gauge on droppxai.com, every burn counted

At a glance

Name / ticker	Blooph / $BLP
Blockchain	Solana
Launch	pump.fun, 27 October 2026 (fair launch)
Contract address	`E4Hwgvp121vT5U5RN8Fkic3gLThBwtJ3a22VPm3Epump`
Total supply	1,000,000,000 $BLP, fixed at creation
Mint / freeze authority	Both switched off at creation
Presale, private sale, team allocation	None
Trading fees	pump.fun Holder Rewards; no buybacks
Role	DroppXAI's mascot and community token
Founder purchase	On the public curve; amount and wallet on droppxai.com/token

02 · THE PRODUCT

DroppXAI: an AI that lives in your community.

DroppXAI makes AI community bots for crypto projects. Each project gets its own bot, under its own name, with its own personality. Whatever your mascot is, your bot becomes it.

Setup is self-service. A project picks a plan on droppxai.com, pays in crypto on Solana, Base or Ethereum, and creates its bot in Telegram with one tap. Everything else is set with buttons in a guided control panel: no code, no server.

Answers, in your voice

- Answers questions from the project's own info, in each member's language
- Friendly, Professional, Lore-heavy, Hype, or your own personality file
- Mascot posts written in character every few hours
- Reports the questions it couldn't answer

Protection

- Captcha, scam filter, link guard, anti-flood
- Anti-impersonation, including look-alike letters in names
- Contract guard: only the official address stays up
- Scam Shield: a scammer caught in one group is blocked in the others

Market & raids

- Buy bot with your look, new holders and bag growth
- Solana (pump.fun included), Ethereum, Base and more
- X raids with live counts and targets

Community

- The DroppXAI Universe: achievements, scores, postcards
- Scheduled posts, welcome messages, rules
- Post from Telegram to Discord with one command

> **Where Blooph fits.** Blooph runs on this exact product: a DroppXAI bot with his own personality, living in our Telegram group. Talk to him there and you see what your own mascot could become.

03 · ROADMAP

One mascot, every platform.

DroppXAI starts where crypto communities live today, Telegram, and grows with them: to Discord, to live streams, and into one panel for all of it.

Now

LIVE

Telegram Community Bot

- Protection, buy bot, X raids and AI answers in the project's own voice
- The DroppXAI Universe with achievements and postcards
- Discord: posts go from Telegram to Discord channels with one command

Next

IN PROGRESS

Discord, both ways

- Posts from Discord to Telegram, already running on DroppXAI's own bot
- Rolled out to every project's bot, with their own channels

Then

PLANNED

Twitch & Kick bot for streamers

- Talks with the stream chat in the streamer's own style
- Collects viewer questions and shows the streamer the top ones
- Runs polls and votes for the chat

Later

PLANNED

One control panel

- Post to Telegram, Discord and streams with one click
- One set of project info, so the AI answers the same everywhere

No release dates are announced. The detailed, up-to-date roadmap is on droppxai.com. This roadmap is DroppXAI's product plan, not a promise about $BLP.

04 · HOLDER REWARDS & BURNS

Fees to holders. Supply only down.

$BLP has two simple mechanics, and DroppXAI controls neither: pump.fun shares trading fees with holders, and anyone can burn.

1

People trade $BLP

Every trade on pump.fun pays a trading fee.

2

pump.fun's contract

Holder Rewards: pump.fun shares part of those fees with $BLP holders automatically, under its own rules.

3

Holders

The share goes to holders. DroppXAI does not receive, hold or control these fees.

There are no buybacks and no other fee promises. pump.fun sets and can change how Holder Rewards work.

The burn gauge

The burn page on droppxai.com shows, live, how much of the supply has burned. It counts every burn, from anyone:

- $BLP sent to Solana's incinerator
- $BLP destroyed with Solana's burn function
- $BLP burned to pay for a Universe postcard

The incinerator

Solana's incinerator is an address nobody controls:

`1nc1nerator11111111111111111111111111111111`

DroppXAI's servers only watch the chain. They hold no keys and sign nothing.

> **Founder disclosure.** The founder bought on the public curve like everyone else, at the same price. The amount and the wallet are published on droppxai.com/token and can be checked on-chain at any time.

05 · TRANSPARENCY & SAFETY

Check it, don't trust it.

On-chain and public

- Supply, mint authority and every burn are visible on Solana
- Founder wallet published on droppxai.com/token
- One official contract address, on droppxai.com and from /ca in our group

Watch-only by design

- DroppXAI servers never hold private keys and never sign transactions
- Payments and burns are detected by watching the chain
- Every payment is recorded in an audit ledger

> **Stay safe.** Admins and mods never DM you first, and never ask for seed phrases, private keys or payments. Real support is only support@droppxai.com. Tokens called "$BLOOPH" or anything similar are not ours: the only real address is the one above.

06 · WHAT $BLP IS NOT

Plain and honest.

- $BLP is **not a share** in DroppXAI. It gives no ownership, voting rights, dividends or revenue share from DroppXAI.
- DroppXAI makes **no promise about the price** of $BLP, and no promise of profit.
- $BLP gives **no access, discount or feature** in DroppXAI. Plans are paid in SOL, ETH or USDC. One exception: a Universe postcard ($5) can also be paid by burning $5 of $BLP.
- Holder Rewards are **pump.fun's**, not DroppXAI's. DroppXAI can't change, pause or guarantee them.
- Burned $BLP is **gone for good**. Nobody, DroppXAI included, can get it back.

07 · RISKS & LEGAL

Know the risks.

- **Volatility:** meme-market tokens can lose most or all of their value quickly.
- **Liquidity:** you may not always be able to sell at the price you want, or at all.
- **Platforms:** $BLP depends on Solana, pump.fun and price services that DroppXAI does not control. Outages or changes there can affect $BLP.
- **Holder Rewards:** what holders receive depends on trading and on pump.fun's rules, which pump.fun can change. Little trading means little or nothing.
- **Mistakes are final:** a wrong address or a lost wallet cannot be undone.
- **Regulation:** crypto rules are changing. New laws may affect how $BLP can be used or offered.

Legal notice

This paper explains how $BLP works. It is **not** a crypto-asset white paper under the EU Markets in Crypto-Assets Regulation (MiCA). No authority has reviewed or approved it. It is not an offer, not financial, legal or tax advice, and not a recommendation to buy or sell anything.

$BLP is not offered for sale by DroppXAI. It trades on public markets that DroppXAI does not run. Only buy what you can afford to lose, and check the rules where you live.

DroppXAI is operated from Norway.
